Assurance
Section C
CS - Testing Report

Name: H.M.G.G. Madurapriya

Reg.No: 122510217

S.No: s22010328

Overview

This report summarizes the automated testing efforts conducted on the Kelani Valley Hospital website. The primary objective of this testing was to ensure the website's core functionalities, including navigation, element presence, and form submission, are working correctly. The testing was carried out using Selenium IDE and the test scripts were exported as Java files. The tests were executed in a controlled environment using Google Chrome on a Windows 10 operating system, leveraging Selenium WebDriver.

The test suite includes three main test cases:

1. Navigation Testing: Verifies that the user can navigate through the main pages of the Kelani Valley Hospital website without encountering any errors.
2. Element Presence Testing: Confirms the presence of critical elements on various pages of the website to ensure all necessary components are loaded correctly.
3. Form Submission Testing: Tests the functionality of the contact form to ensure that users can submit their inquiries successfully and receive appropriate confirmation.

Overall, the testing aims to provide assurance that the Kelani Valley Hospital website delivers a seamless and functional user experience.

Test Environment

- Browser: Google Chrome (Version 90.0)
- OS: Windows 10
- Tools: Selenium WebDriver, TestNG, ChromeDriver

Test Execution Summary

- Total Test Cases: 3
- Passed: 2
- Failed: 1

Detailed Test Results

Test Case 01: Open Website and Navigate Pages

Title: Open Website and Perform Navigation Testing

Status: Pass

Remarks: All pages loaded correctly without any errors.

Test Case 02: Form Submission Testing

Title: Form Submission Testing

Status: Fail

Remarks: The form submission encountered an error when attempting to upload a file.

The steps executed were:

1. Open the page at <https://kelanivalleyhospital.lifegroup.lk/jobs/senior-staff-nurses/> - OK
2. Set window size to 697x735 - OK
3. Click on the applicant name field - OK
4. Enter the name "Gihan Greshan" - OK
5. Click on the applicant email field - OK
6. Enter the email "gihangreshan4@gmail.com" - OK

7. Click on the applicant phone field - OK
 8. Enter the phone number "0704960649" - OK
 9. Click on the cover letter field - OK
 10. Enter "Test" as the cover letter - OK
 11. Click on the file upload field - OK
 12. Click on the privacy policy checkbox - OK
 13. Verify the privacy policy checkbox is checked - OK
 14. Click on the file upload field - OK
 15. Attempt to upload the file "Test CV Submission.pdf" - Failed: {"code":-32000,"message":"Not allowed"}
- Error encountered during file upload, indicating that the file upload action is not permitted by the browser or the website configuration.

Test Case 03: Element Presence Verification

Title: Check Element Presence

Status: Pass

Remarks: All specified elements were present on their respective pages.

Issues and Bugs

Issue ID: TC02-001

Description: File upload action not permitted during form submission.

Status: Open

Remarks: Investigate browser and website configuration to allow file uploads during automated tests.

Summary of Testing Process, Challenges Encountered, and Lessons Learned

Testing Process

The testing process for the Kelani Valley Hospital website was structured and systematic. It included the following key steps

Test Planning: Identifying the core functionalities to be tested, which included navigation through the website, presence of critical elements on different pages, and the form submission process.

Test Script Development: Using Selenium IDE to record the actions and generate automated test scripts. The scripts were then exported as Java files to facilitate further testing.

Test Execution: Running the test scripts in a controlled environment using Google Chrome. The tests were executed multiple times to ensure consistency and reliability of the results.

Results Analysis: Reviewing the outcomes of each test case to verify if they met the expected results. Any deviations or errors encountered were documented for further investigation.

Challenges Encountered

File Upload Issue: During the form submission testing, an error was encountered when attempting to upload a file. The browser or the website configuration did not permit the file upload action, resulting in a failure for this test case.

Element Identification: Some elements on the website were dynamic, which made it challenging to consistently identify them during test execution.

Browser Compatibility: Ensuring that the tests ran smoothly across different browsers posed a challenge. The primary tests were conducted on Google Chrome, but compatibility checks on other browsers indicated potential issues that would need to be addressed.

Lessons Learned

Handling File Uploads: File upload actions require special handling in automated tests. Ensuring the right permissions and configurations are in place in the browser and the website is crucial for the success of such tests.

Cross-Browser Testing: While focusing on a single browser can speed up initial testing, incorporating cross-browser testing early in the process can help identify compatibility issues sooner, leading to more comprehensive testing coverage.

Effective Use of Automation Tools: Leveraging the full capabilities of automation tools like Selenium IDE can significantly enhance testing efficiency. However, it is essential to understand the limitations and configurations required for specific actions, such as file uploads and handling dynamic elements.

Conclusion

The test cases for navigation and element presence passed successfully, indicating that these functionalities are working as expected on the Kelani Valley Hospital website. However, the form submission test case failed due to an issue with the file upload action, which needs further investigation and resolution. Future tests should include more detailed validations and edge case scenarios to ensure comprehensive coverage.
